Problem:

A **square triple** (a, b, c) is a triple where a , b , and c are **integers** and $a^2 + b^2 = c^2$.

Given an integer n , return the number of **square triples** such that $1 \leq a, b, c \leq n$.

Example 1:

Input: $n = 5$

Output: 2

Explanation: The square triples are (3,4,5) and (4,3,5).

Example 2:

Input: $n = 10$

Output: 4

Explanation: The square triples are (3,4,5), (4,3,5), (6,8,10), and (8,6,10).

Constraints:

- $1 \leq n \leq 250$
