Problem:

Given a string `s` consisting only of characters *a*, *b* and *c*.

Return the number of substrings containing **at least** one occurrence of all these characters *a*, *b* and *c*.

Example 1:

Input: `s = "abcabc"`

Output: 10

Explanation: The substrings containing at least one occurrence of the characters *a*, *b* and *c* are "abc", "abca", "abcab", "abcabc", "bca", "bcab", "bcabc", "cab", "cabc" and "abc" (again).

Example 2:

Input: `s = "aaacb"`

Output: 3

Explanation: The substrings containing at least one occurrence of the characters *a*, *b* and *c* are "aaacb", "aacb" and "acb".

Example 3:

Input: *s* = "abc"

Output: 1

Constraints:

- $3 \leq s.length \leq 5 \times 10^4$
- *s* only consists of *a*, *b* or *c* characters.
