Problem:

Given an binary array `nums` and an integer `k`, return `true` if all `1`'s are at least `k` places away from each other, otherwise return `false`.

Example 1:

Input: `nums = [1,0,0,0,1,0,0,1]`, `k = 2`

Output: `true`

Explanation: Each of the 1s are at least 2 places away from each other.

Example 2:

Input: `nums = [1,0,0,1,0,1]`, `k = 2`

Output: `false`

Explanation: The second 1 and third 1 are only one apart from each other.

Constraints:

- `1 <= nums.length <= 105`
- `0 <= k <= nums.length`
- `nums[i]` is `0` or `1`
